DETAILED ACTION

Response to Amendment

1. This Office action is in response to the amendment filed 09/29/2009, wherein the specification and claims 1 and 12 have been amended. Claims 1-3, 5-7, 9, 12, 13 and 15-19 are pending.

Allowable Subject Matter

2. Claims 1-3, 5-7, 9, 12, 13 and 15-19 are allowed.

3. The following is an examiner's statement of reasons for allowance: The present claims are allowable over the closest prior art references of record: Ishizuka et al. (US 2004/0010052) and Caiger et al. (US 6,586,492).

The independent claim 1 recites a non-aqueous, substantially solvent-free and photoinitiator-free, particle beam curable ink having a viscosity less than 30 mPa·s at 60°C, comprising a colorant and a mixture of (meth)acrylate compounds, wherein the colorant is present in the ink in an amount of 0.1-14.9 wt% and the mixture of (meth)acrylate compounds comprises c% of one or more (chemically specified) mono(meth)acrylate, d% of one or more di(meth)acrylate and e% of one or more compounds having three or more (meth)acrylate groups, wherein c%, d%, and e% are weight percents based on the total weight of the (meth)acrylate compounds, and are such that the value of the following formula is from 49 to 55.8:

$$c\% + 0.628 \left(\frac{d\%}{\sin 60^\circ} + \frac{e\%}{\tan 60^\circ} \right)$$

Ishizuka et al. discloses a radiation curable ink comprising a colorant (in an amount within the claimed range) and a mixture of (meth)acrylate compounds comprising monofunctional, difunctional and multifunctional (meth)acrylate compounds. Depending on the radiation sources, photoinitiators may be employed. The ink has a viscosity of 10-80 mPa·s. However, the amounts of the (meth)acrylate compounds do not satisfy the formula shown above and there are no obvious reasons for one skilled in the art to manipulate the weight ratios of the (meth)acrylate compounds to arrive at the presently claimed ink composition.

Caiger et al. discloses a radiation curable ink comprising a colorant (in an amount within the claimed range), a photoinitiator, and a mixture of (meth)acrylate compounds comprising monofunctional, difunctional and multifunctional (meth)acrylate compounds. The ink has a viscosity less than 25 mPa·s at 40-130°C. However, Caiger fails to teach a curable ink substantially photoinitiator-free. Further, the amounts of the (meth)acrylate compounds do not satisfy the formula shown above and there are no obvious reasons for one skilled in the art to manipulate the weight ratios of the (meth)acrylate compounds to arrive at the presently claimed ink composition.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
